PRODUCT UPDATE

Parker Silicone Hose – Product & Packaging Update

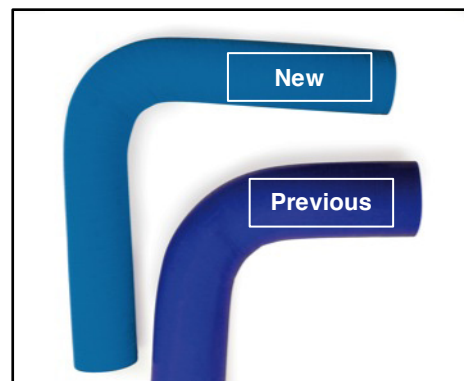

Selected items within the silicone hose offering are changing to improve product quality, consistency and delivery. The changes are due to improvements in hose processing at the manufacturing level and production moving to the USA, greatly reducing lead times. Specifically:

- Blue hoses change to a lighter blue cover color
- Coolant hoses change from a glossy finish to a dull matte finish
- Coolant hose brand text now incorporates the size (ID)
- The brand text changes from white ink to black ink (where applicable)
- Heater hoses change from a maximum reel footage of 500 feet to 250 feet (part numbers indicating 500-foot reels are obsolete when current inventories are depleted)
